● ABOUT ME

Full Stack Software Engineer specializing in **Front end & mobile** engineering with 5+ years of experience building products with a strong focus on scalable code architectures and performant UIs while ensuring responsiveness across a variety of screen types.

My professional experience in software engineering consists of writing web and mobile applications for startups both as front and back end developer as well as writing automation and integration tests.

Besides having solid foundations and expertise in **JavaScript** and technologies revolving around it, I was taught the basics of **Python** during my time as a student in the **Technical Educational Institute of Eastern Macedonia & Thrace**.

I am a **fast learner** and can adapt to teams and new technologies with ease.

● SKILLS

Front-end

React js | React Native | NextJS | React Context API | React Query | TypeScript | Tailwind | Websockets

Back-end

NodeJS | PostgreSQL | MongoDB | AWS | RDS

Tooling & General

Documentation | Docker | Python | Testing | Figma Design

● WORK EXPERIENCE

SENIOR REACT NATIVE DEVELOPER – BASE ELEMENT – 01/06/2025 – Current – NICOSIA, REMOTE., CYPRUS

- Upgraded large-scale **React Native** applications with **thousands of active users** by migrating to the latest React Native versions and updating Android/iOS target SDKs, ensuring compatibility and long-term stability.
- Designed and implemented **complex** and **high-impact features** with smooth, performant **animations and interactive UI components**.
- Improved application **performance** and maintainability by refactoring legacy code, integrating modern libraries, and following best practices in React Native and TypeScript.
- Collaborated closely with product managers, designers, and QA teams to deliver new functionality while maintaining high-quality user experience across platforms.
- Troubleshoot and resolved critical platform-specific issues (Android & iOS), ensuring **seamless cross-platform performance**.

FULL STACK SOFTWARE ENGINEER – KANELIS DEVELOPMENT LABS (KDL) – 01/10/2023 – 10/06/2025 – REMOTE, GREECE

- Developed mobile applications using **React Native** and **TypeScript**, with strong focus on **React hooks** for state and lifecycle management.
- Built and maintain a form submission web application using Angular 17 with **NgRX** for reactive state management on the front end and **ExpressJS** with **PostgreSQL** for back-end services, including authentication and data storage. Hosted said application in an **Ubuntu** server using **Docker** containers and **Nginx** for port redirection.
- Developed a modern information management web application using **React**, backed by **Firebase Firestore** and **Firebase Authentication** for **real-time data visualization** and secure access control.
- Maintained and delivered new features on a legacy Sails.js system that was hosted via **AWS cloud services** while stored in an **RDS MySQL** instance

In this role, I collaborated with a cross-functional team of developers and QA engineers to enhance a high-traffic web platform serving thousands of daily active users. Key responsibilities included:

- Developing responsive and accessible front-end components using HTML, CSS, and JavaScript.
- Designing and implementing **RESTful APIs** with Express.js to support new platform features.
- Writing automated integration tests using Jest to ensure the reliability and robustness of back-end services.

FULL STACK SOFTWARE ENGINEER – FLARMIO – 01/10/2021 – 01/05/2023 – REMOTE, GREECE

In this role I was a productive member of an Agile team team that maintained a web application with hundreds of users while helping out a second team with the development of a mobile application. My responsibilities were:

- Developing code for new features and maintaining already existing code based on **ReactJS**, **React Native** and **TypeScript** while ensuring the app remains performant and responsive.
- Collaborate with **product managers** and **stakeholders** to break down large initiatives into executable engineering tasks.
- Writing automated e2e and integration tests using **Cypress IO**.
- Implementation of CI for automated tests using **GitHub actions**.
- Building back-end software using **Express.js** and **MongoDB** while exposing the backend through **GraphQL** APIs.

INTERNSHIP – KANELIS DEVELOPMENT LABS (KDL) – 01/04/2021 – 01/10/2021 – REMOTE, GREECE

- Learn JavaScript basic concepts like OOP, array functions (map, filter etc) and async/await.
- Learn React basic concepts such as **state management** and **side effects**.
- Basic backend development with NodeJS, Express and PostgreSQL.
- Learn basic front-end development with React consepts such as **translating Figma Designs into HTML** with tailwind/css and ensuring **responsiveness** across screens.

● EDUCATION AND TRAINING

Kavala, Greece

COMPUTER ENGINEERING Technological Educational Institution of Eastern Macedonia and Thrace

CERTIFICATE PROFICIENCY IN ENGLISH Michigan

● LANGUAGE SKILLS

Mother tongue(s): **GREEK**

Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	C2	C2	C2	C2	C2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

● PROJECTS

Enriched Notes & Tasks

Offline-first cross-platform **React Native** application designed to manage personal notes and tasks with focus on performance and data privacy.

- Designed and developed a privacy-focused notes and tasks application for Android and iOS using a shared React Native codebase.
- Implemented offline data persistence, **biometric authentication**, reminders, search, and rich note editing to deliver a reliable mobile experience without constant network access.
- Built state management with **React Context** and dedicated feature providers, separating notes, tasks, and theming concerns for a maintainable and scalable mobile architecture.

- Structured the app with reusable UI components and feature-based modules to support maintainability and future scaling.
- Preparing the application for app store release, with focus on production readiness and user experience.

01/09/2024 – 02/2025

Site management app for technicians

React native application built for real time site-access management for technicians and admins. This application was built for internal use for one of Greece's top mobile communication providers and their technicians.

- The application was built using **React Native(EXPO 51)**
- Global application state management with **React Context API**
- Feature based architecture for easier code management and scalability
- Google maps & geolocation integrations
- Site management was controlled using **real-time data** and command delivery via **websockets**

Since an NDA was signed I cannot provide more information but I encourage anyone interested in learning about this or any other project developed by me to reach out to [George Kanellis](#) (Kanellis Development Labs CEO & Founder) for more information.

01/06/2024 – 01/10/2024

EAGME form submission web app

Form submission web app

- Front end built using **Angular**
- **Fully responsive design** applying any reasonable screen shape & size.
- Admin routes protected via **auth guards**
- Http interceptor for token addition to each request ensuring single point of access in the code
- Google maps integration & location tracking
- Back end developed with **ExpressJS** and supporting libraries (postgres ORM, express-jwt)

● RECOMMENDATIONS

George Kanellis Manager

"Stefanos combined strong technical skills with genuine ownership. He wrote clean, maintainable code, approached problems methodically, and could be trusted to take a feature from ambiguity all the way to delivery with minimal oversight. Whenever something important needed to be done well, Stefanos was one of the first people I thought of."
